

IN THE CLAIMS:

Cancel claims 4-8 and 11 before calculating the filing fee as shown in the following listing of claims, which replaces all prior versions and listings of claims.

1. (original) A card type electronic device system comprising: a card type electronic device to operate on receiving a current supply from a host device to which the card type electronic device is to be attached; and an exclusive-use adapter to adapt a shape of the device to that of a specific second card slot having a maximum supply current standard value which is larger than that of a first card slot for the card type electronic device,

the card type electronic device further comprising: recognition means for recognizing the exclusive-use adapter in accordance with a predetermined recognition procedure after the operation starts; and

control means for selecting predetermined operation conditions which meet the maximum supply current standard value of the first card slot, in a case where the exclusive-use adapter is not recognized and on the other hand, for selecting predetermined operation conditions which meet the maximum supply current standard value of the second card slot, in a case where the exclusive-use adapter is recognized,

the exclusive-use adapter including self identification means which meets the predetermined recognition procedure.

2. (original) The card type electronic device system according to claim 1, wherein the recognition means transmits a predetermined signal to the exclusive-use adapter, and recognizes the exclusive-use adapter in response to a response to this transmitted signal, and

the identification means receives the transmitted signal to make a predetermined response.

3. (original) The card type electronic device system according to claim 1, wherein the identification means transmits a predetermined signal to the card type electronic device, and

the recognition means receives the predetermined signal from the identification means to thereby recognize the exclusive-use adapter.

4. - 8. (canceled)

9. (original) A card type electronic device to be inserted into a first card slot of a host device to which the card type electronic device is to be attached or to be inserted into a second card slot via an exclusive-use adapter to adapt a shape of the device to that of the second card slot

having a maximum supply current standard value which is larger than that of the first card slot, the card type electronic device being configured to operate on receiving a current supply from the card slot into which the device has been inserted,

the card type electronic device comprising:

recognition means for recognizing the exclusive-use adapter in accordance with a predetermined recognition procedure after the operation starts; and

control means for selecting predetermined operation conditions which meet the maximum supply current standard value of the first card slot, in a case where the exclusive-use adapter is not recognized and on the other hand, for selecting predetermined operation conditions which meet the maximum supply current standard value of the second card slot, in a case where the exclusive-use adapter is recognized.

10. (original) The card type electronic device according to claim 9, wherein the recognition means transmits a predetermined signal to the exclusive-use adapter, and recognizes the exclusive-use adapter in response to a response to this transmitted signal.

11. (canceled)
